Abstracts

A defense drone or UAV is an airplane without a pilot on board. Human pilots on the ground control these machines through satellite-powered remote controls, or autonomously through onboard computers. These drones are an essential tool for modern defense forces because of their endurance and versatility, which makes them suitable for intelligence gathering and support roles for military operations. Drones can also be engineered to operate autonomously with onboard instruments with different functionalities, which are controlled and directed by instructors or an analyst operating out of a remote location in real time.

According to our (Global Info Research) latest study, the global Defense Drones market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The global defense industry is driven by massive investments in R&D, leading to the development of advanced technologies that enhance endurance, survivability, and functions of UAVs or drones.
