Abstracts

A defense drone or UAV is an airplane without a pilot on board. Human pilots on the ground control these machines through satellite-powered remote controls, or autonomously through onboard computers. These drones are an essential tool for modern defense forces because of their endurance and versatility, which makes them suitable for intelligence gathering and support roles for military operations. Drones can also be engineered to operate autonomously with onboard instruments with different functionalities, which are controlled and directed by instructors or an analyst operating out of a remote location in real time.
