Abstracts

According to our (Global Info Research) latest study, the global Deferasirox market size was valued at US\$ 3065 million in 2024 and is forecast to a readjusted size of USD 4128 million by 2031 with a CAGR of 4.4% during review period.

Deferasirox is an oral iron chelator. Its main use is to reduce chronic iron overload in patients who are receiving long-term blood transfusions for conditions such as beta-thalassemia and other chronic anemias.

Deferasirox is marketed as Exjade, Desirox, Defrijet, Desifer, and Jadenu.

The half-life of deferasirox is between 8 and 16 hours allowing once a day dosing. Two molecules of deferasirox are capable of binding to 1 atom of iron which is subsequently eliminated by fecal excretion. Its low molecular weight and high lipophilicity allows the drug to be taken orally unlike deferoxamine which has to be administered by IV route (intravenous infusion). Together with deferiprone, deferasirox seems to be capable of removing iron from cells (cardiac myocytes and hepatocytes) as well as removing iron from the blood.

The major global manufacturers of Dillaros are Novartis, Cipla, Natco Pharma and Sun Pharma, among which Novartis is the industry leader with a market share of around 99%. North America is the largest spending region, with 30 per cent of the market, followed by Europe with 25 per cent.
