According to our (Global Info Research) latest study, the global Defibrillator market size was valued at USD 14760 million in 2023 and is forecast to a readjusted size of USD 18340 million by 2030 with a CAGR of 3.2% during review period.

Defibrillation is a common treatment for life-threatening cardiac dysrhythmias, ventricular fibrillation and pulseless ventricular tachycardia. Defibrillation consists of delivering a therapeutic dose of electrical energy to the heart with a device called a defibrillator. This depolarizes a critical mass of the heart muscle, terminates the dysrhythmia and allows normal sinus rhythm to be reestablished by the body's natural pacemaker, in the sinoatrial node of the heart. Defibrillators can be external, transvenous, or implanted (implantable cardioverter-defibrillator), depending on the type of device used or needed. Some external units, known as automated external defibrillators (AEDs), automate the diagnosis of treatable rhythms, meaning that lay responders or bystanders are able to use them successfully with little or no training at all.

Global Defibrillator key players include Physio-Control, Medtronic, Boston Scientific, Nihon Kohden, Zoll Medical, etc. Global top five manufacturers hold a share over 30%.

North America is the largest market, with a share about 50%, followed by Europe, and Asia-Pacific, both have a share about 45 percent.

In terms of product, Automatic External Defibrillators is the largest segment, with a share over 45%. And in terms of application, the largest application is Hospital, followed by Public Access, Home Healthcare, etc.
