The global Defoamers for Adhesives market size is expected to reach \$ 846.9 million by 2030, rising at a market growth of 2.5% CAGR during the forecast period (2024-2030).

The market for defoamers in adhesives is driven by the demand for high-quality bonding solutions with minimal defects and consistent performance across industries such as construction, automotive, packaging, and textiles. Defoamers play a crucial role in preventing foam-related issues such as surface defects, air entrapment, and uneven curing, which can affect adhesive bond strength and durability. Market trends include the development of defoamers with improved compatibility, efficiency, and stability, as well as innovations in formulation technologies to address specific foam control challenges in different adhesive systems and applications.

Defoamers for adhesives are additives that control foam formation and eliminate entrapped air bubbles in adhesive formulations during mixing, application, and curing. These additives help to improve adhesive performance, reduce defects, and enhance production efficiency.
