According to our (Global Info Research) latest study, the global Defocus Spectacle Lenses market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Defocus spectacle lenses, also known as defocus control lenses or myopia control lenses, are a type of eyeglasses designed to manage myopia (nearsightedness) in individuals, particularly in children and young adults. Myopia is a common refractive error where distant objects appear blurry, while close-up objects can be seen clearly.

The concept behind defocus spectacle lenses is to deliberately introduce controlled amounts of myopic defocus to the peripheral retina while maintaining clear central vision. This approach is believed to slow down the progression of myopia in children, potentially reducing the degree of myopia as they grow.
