## Abstracts

According to our (Global Info Research) latest study, the global Degassing Membrane Contactors market size was valued at US\$ 388 million in 2024 and is forecast to a readjusted size of USD 557 million by 2031 with a CAGR of 5.4% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Degassing membrane contactors are devices used to remove dissolved gases, such as oxygen or carbon dioxide, from liquids. These contactors use a special membrane, typically a hydrophobic (water-repellent) material, that allows gases to pass through while keeping liquids separate. The degassing process occurs when a gas-free area, often a vacuum or a sweep gas, is created on one side of the membrane, pulling the dissolved gases out of the liquid as they diffuse through the membrane.
