## Abstracts

The global Degradable Agricultural Film market size is expected to reach \$ 658.6 million by 2029, rising at a market growth of 3.0% CAGR during the forecast period (2023-2029).

Agricultural degradable plastic film is a new type of degradable plastic film. The degradation principle is that degradable biomass is mixed into the plastic components, so that the large pieces of plastic are easily degraded into small pieces of plastic. However, this kind of degradable is not really and completely degraded, and the plastic that has been degraded into small particles still remains in the soil, and this material is powerless to the subsequent degradation of small pieces of plastic.

This report studies the global Degradable Agricultural Film production, demand, key manufacturers, and key regions.
