Abstracts

According to our (Global Info Research) latest study, the global Degradable Materials market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Biodegradable materials (pure polymer, blended product, or composite) obtained from renewable resources could be classified as green polymers, and their attributes have attracted considerable attention for their possible roles as alternatives to petrochemical-derived materials.

Plastic pollution ultimately affects all kinds of organisms and humans through the food chain. After use, degradable materials can be degraded into environmentally harmless substances under natural environmental conditions, and are mainly used to replace plastics that are directly discarded into nature.
