The global Dehydration Membrane market size is expected to reach \$ 410 million by 2032, rising at a market growth of 6.6% CAGR during the forecast period (2026-2032).

Dehydration membrane is a material that uses special membrane materials to separate and remove moisture. It achieves the purpose of removing water by forming an effective filtration barrier on the membrane, allowing water to pass through the membrane while other solutes are retained on the other side of the membrane. In industry, dehydration membranes are often used to prepare solvent systems such as anhydrous ethanol to improve the purity of the solvent by removing moisture from the raw ma
