The treatment for dementia is conducted through therapeutic approaches that provide symptomatic relief as the drugs intended for the treatment only treat the symptoms. The existing drugs in the market are unable to attack the underlying cause of the disease and prolong the treatment cost and time duration. This will in turn increase the demand for DMD since it will safely modify the progression of a disease.

The market is highly competitive and fragmented due to the presence of several large players that have launched successful drugs. The expiry of the patents significantly affects the performance of the manufacturers.
