Dementia is a collective term for disorders characterized by progressive degeneration of the brain. It impairs memory and affects behavioral, emotional, and cognitive abilities. The neuronal death or neuronal malfunction associated with the disorder manifests as shifts in mood and personality changes, difficulty in performing activities, loss of memory, and aphasia.

According to our (Global Info Research) latest study, the global Dementia and Movement Disorder Treatment market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The treatment for dementia is conducted through therapeutic approaches that provide symptomatic relief as the drugs intended for the treatment only treat the symptoms. The existing drugs in the market are unable to attack the underlying cause of the disease and prolong the treatment cost and time duration. This will in turn increase the demand for DMD since it will safely modify the progression of a disease.
