Abstracts

Demineralization is a water treatment technique that removes impurities such as calcium, silica, iron, and magnesium from water. The demineralization plant consists of two beds of chemically treated resin beads that operate in series. Water purification is a process that alters used or polluted water to its natural state, making it suitable for several applications in various fields. Scope of the Report:

This report focuses on the Demineralization Plants in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Lead-acid batteries are extensively used in the automotive industry across the globe since they have been designed to maximize current paths and lower internal resistance. The growing automotive market and the rising demand for lead-acid batteries, is increasing the need for recycling these batteries. This, in turn, will increase the need for pure water that is achieved through demineralization process.

The increasing need for demineralization plants in developing countries is one of the major trends that will gain traction in the demineralization plants market in the coming years. The rising industrial development will result in an increased number of people moving to cities, subsequently increase the consumption of water. This will lead to higher wastewater treatment discharge into surface water. This will increase the contaminants in the water, in turn, demanding the need for advanced technologies to treat and purify water.

The demineralization plants market is characterized by the presence of multiple global and regional manufacturers and is highly fragmented. The competition among the players in this marketplace is quite intense. One of the common strategies followed by manufacturers is to strengthen their product portfolio by M&A activities which will help

them enhance their geographical presence. The presence of manufacturers with high capital resources and dedicated R&D funds for developing new technologies pose a challenge for medium and small manufacturers who have fewer resources. The worldwide market for Demineralization Plants is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
