Demolition shears for excavators, also known as demolition attachments or shears, are specialized tools used for demolition and dismantling applications. These attachments are designed to be mounted onto excavators and are used to cut through and dismantle various materials such as concrete, steel structures, and other building materials.

Demolition shears come in different types and configurations to suit various demolition needs. They can be used for cutting through concrete walls, steel beams, rebar, pipes, and other materials commonly encountered in demolition projects. These attachments are equipped with powerful hydraulic cylinders and blades that can deliver high cutting forces. This enables them to cut through tough materials with ease, making them suitable for demolition tasks. Demolition shears are designed with safety features like blade guards and hydraulic safety valves to prevent accidents and ensure safe operation. They allow controlled cutting with minimal risk to operators and surrounding structures.
