## Abstracts

According to our (Global Info Research) latest study, the global Data Centre Fabric market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Data centre fabric also termed as unified fabric is an architecture in which the set of nodes and links are connected to each other, which looks like a fabric collectively. In a network, this fabric altogether connects thousands of storage devices and servers.

This architecture ensures that every connected device is only a single hop away from the other device. This helps in supporting the data centers by decreasing the switching time and multiple hops between the devices. Reducing the number of hops increases the efficiency of the data centre.

The Global Info Research report includes an overview of the development of the Data Centre Fabric industry chain, the market status of Banking & Financial Services (Storage Area Network (SAN), Switching), High Tech Industries (Storage Area Network (SAN), Switching), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Data Centre Fabric.
