## **Abstracts**

The global Dendritic High-Purity Electrolytic Copper Powder market size is expected to reach \$ 836 million by 2032, rising at a market growth of 6.0% CAGR during the forecast period (2026-2032).

In 2025, global production of dendritic high-purity electrolytic copper powder reached 46,000 tons, with an average selling price of US\$11,740 per ton. Dendritic high-purity electrolytic copper powder refers to copper powder produced by electrochemical deposition in a copper sulfate-sulfuric acid system using high-purity copper cathodes/copper plates as raw materials. It features dendritic particle morphology, high purity, low bulk density, high specific surface area, and excellent electrical and thermal conductivity. Its main applications are concentrated in powder metallurgy and sintered parts, electrical contact materials, conductive adhesives/slurries, EMI shielding, carbon brushes, friction materials, brake pads, brazing, diamond tools, and metal injection molding (MIM). The upstream mainly includes high-purity copper cathodes/copper plates, copper sulfate, and sulfuric acid as electrolyte chemicals; the midstream is the production and manufacturing of high-purity electrolytic copper powder; and the downstream connects to industries such as electronics, electrical engineering, automotive, industrial machinery, construction, and communications. The gross profit margin is approximately 20%-30%.
