Abstracts

The global Dengue NS1 ELISA Kits market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The industry trend for Dengue NS1 ELISA Kits is increasing due to the rise in the number of Dengue cases globally, particularly in tropical and subtropical regions. The need for rapid and accurate diagnosis of Dengue fever to implement timely treatment and control measures is driving the demand for these ELISA kits. Additionally, research and development efforts to improve the sensitivity and specificity of the kits and the development of vaccines are expected to positively impact the industry trend. However, the availability of alternative diagnostic methods and the implementation of vector control programs may influence the industry dynamics.

Dengue NS1 ELISA Kits are diagnostic tools used for the detection and quantification of the Dengue virus non-structural protein 1 (NS1) in patient samples. The NS1 protein is present in the blood of individuals infected with the Dengue virus and can be detected as early as the first day of symptoms. These ELISA kits utilize specific antigen-antibody reactions to detect the presence of NS1, aiding in the diagnosis of Dengue fever. They typically include pre-coated microplates, NS1 antigen, detection antibodies, and necessary reagents.

This report studies the global Dengue NS1 ELISA Kits production, demand, key manufacturers, and key regions.
