The *Aedes aegypti* mosquito is responsible for transmitting the dengue virus (DENV). The virus that causes dengue belongs to the Flavivirus genus of the Flaviviridae family. Dengue fever resembles influenza and affects adults, children, as well as infants, but it is rarely fatal. However, dengue hemorrhagic fever is a potentially fatal complication because of multiple factors such as fluid accumulation, severe bleeding, organ impairment, or plasma leaking.

Scope of the Report:

This report focuses on the Dengue Vaccine in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. With the increasing population density and global warming, there is a rapid growth in the prevalence of dengue, especially in the tropical and subtropical regions across the world. According to the National Institute of Health, approximately 0.05 to 0.2 billion cases of dengue infections are reported annually and the mortality rate due to dengue was above 20,000. The report has identified the rapid growth in disease incidences as one of the primary factors that will fuel the growth of the dengue vaccine market in the coming years. The prevalence of dengue is present in more than 125 countries across the world and the rising prevalence of dengue will drive the market during the forecast period.

The dengue vaccine market is marginally concentrated due to the presence and dominance of the established players. Several companies are investing in R&D to develop more advanced products and expand their product portfolio. Several organizations are merging for research and making enormous efforts to develop

vaccines that can challenge the Sanofi Pasteur's exclusivity in the dengue treatment market. Moreover, several organizations are making huge investments in R&D to develop novel treatment options.

The Americas will be the major revenue contributor to the dengue vaccine market owing to the increasing incidences of dengue cases. The dengue treatment market in the Americas will profit from the bilateral program, Indo-U.S. Vaccine Action Program (VAP), which is concentrated on activities related to immunization and vaccine-related research.

The worldwide market for Dengue Vaccine is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
