Dental anaesthetic delivery system is a pain control techniques in dentistry and local anaesthetic is the most effective drugs in the management of pain. Needles is used for the delivery of local anesthetics to provide clinically adequate pain control. Many innovations has been added to the traditional method of dental anaesthetic delivery system. It is important to deliver anesthtic solution at a constant rate and at slower speed to avoid discomfort to the patients. Dental anaesthetic delivery system is computer controlled technology to control the rate and flow of the anesthtic solution where the use of conventional syringes was difficult into dense tissues like palate where more pressure is needed. Dental anaesthetic delivery system cause pain as it damages soft tissue during penetration of the oral mucosa, temperature of anesthetic solution, pressure from the spread of the anesthetic solution and pain from the characteristics of the drug.
