According to our (Global Info Research) latest study, the global Dental Arch Wire market size was valued at USD 167.7 million in 2023 and is forecast to a readjusted size of USD 195.3 million by 2030 with a CAGR of 2.2% during review period.

Dental Archwire is a wire conforming to the alveolar or dental arch that can be used with dental braces as a source of force in correcting irregularities in the position of the teeth. An archwire can also be used to maintain existing dental positions; in this case it has a retentive purpose. Orthodontic archwires may be fabricated from several alloys, most commonly stainless steel, nickel-titanium alloy, and beta-titanium alloy.

Dental arch wires are used in orthodontic treatments to apply controlled forces to the teeth, aligning them into the desired position and correcting dental malocclusions. Several factors are driving the growth of the dental arch wire market. Firstly, the increasing prevalence of dental malocclusions and the growing demand for aesthetically pleasing smiles are contributing to the rising adoption of orthodontic treatments. Factors such as genetic predisposition, improper dental habits, and craniofacial abnormalities are leading to a higher number of individuals requiring orthodontic intervention, thereby driving the demand for dental arch wires. Secondly, technological advancements in orthodontic materials and techniques have significantly improved the effectiveness and efficiency of orthodontic treatments. Dental arch wires are now available in various materials, such as stainless steel, nickel-titanium, and beta-titanium, offering different mechanical properties and treatment options. The development of shape memory alloys and customized arch wires has further enhanced treatment outcomes and patient comfort.
