## Abstracts

The global Dental Bridges market size is expected to reach \$ 1553 million by 2032, rising at a market growth of 5.7% CAGR during the forecast period (2026-2032).

Dental bridges are fixed prosthetics devices used to restore teeth size, strength, and shape. Dental bridges also helps in improving teeth appearance. dental bridges are used to maintain the shape of face, restore ability to chew and speak, and prevent remaining teeth from shifting out of position. These are mounted onto existing teeth by a dentist. Dentists support dental bridge therapies due to their comfort and expertise with performing these restorations.

The global dental bridge market is characterized by a competitive landscape featuring the coexistence of large denture manufacturing groups and regional dental laboratories, resulting in relatively low market concentration. Key manufacturers include Glidewell Dental, Modern Dental Group, National Dentex Labs/DSG, Sun Dental Labs, ROE Dental Laboratory, Labowada (Japan), and World Lab, alongside Chinese companies such as Kangtaijian and Jiahong Dental. Large enterprises are continuously expanding their market share by leveraging digital design, centralized CAD/CAM processing, cross-regional production bases, and stable networks of dental clinic clients. In terms of product types, dental bridges include traditional bridges, implant-supported bridges, and cantilever bridges; material-wise, they primarily consist of all-zirconia, all-metal, or polymer-based bridges. While zirconia and implant-supported bridges are experiencing rapid growth, traditional porcelain-fused-to-metal (PFM) bridges maintain significant demand in price-sensitive markets. The upstream supply chain comprises materials such as zirconia blocks, glass-ceramics, dental alloys, porcelain powders, resins, PEEK, implant abutments, and connecting components, as well as equipment including intraoral scanners, dental CAD software, milling machines, sintering furnaces, and 3D

printers; representative suppliers include Dentsply Sirona, Ivoclar, Kuraray Noritake, GC, SHOFU, VITA Zahnfabrik, Straumann, and Nobel Biocare. Key market drivers include an aging population and a rising number of individuals with tooth loss, increased public awareness regarding dental restoration, higher penetration rates of implant therapy, declining costs for zirconia materials, the widespread adoption of digital impressions and CAD/CAM technology, and improved delivery efficiency through automated production by large manufacturers. Conversely, the market faces challenges such as the substitution of certain traditional bridge cases by single-tooth implant crowns, high treatment costs, insufficient dental insurance coverage, a shortage of skilled dental technicians, difficulties in achieving fully standardized economies of scale due to the personalized nature of production, substantial investment requirements for materials and equipment, and stringent regulatory and quality certification standards for medical devices across different countries. Overall, the future dental bridge market is expected to evolve toward greater adoption of zirconia materials, implant-supported solutions, digital workflows, and centralized production, with large denture manufacturing groups projected to grow faster than traditional, small-scale regional dental laboratories.
