## Abstracts

Dental crowns and bridges are prosthetic dental devices used for dental restoration. They help to alter the shape and size of tooth, offer strength, and improve aesthetic appearance. Some of the common dental problems include bad breath, tooth decay, gum disease, mouth sores, oral cancer, and tooth sensitivity. Most crowns and bridges are made of porcelain or ceramic material that matches the color of the natural tooth. Other materials include titanium, gold, acrylic, and metal alloys. These are mounted or cemented onto existing tooth, which can only be removed by dentists.

According to our (Global Info Research) latest study, the global Dental Crowns and Bridges market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. Increasing incidences of oral diseases is one of the critical factors driving the growth of dental crowns and bridges market in the coming years. Oral health problems are common among individuals of all ages, but many are preventable. Some of the most common issues are bleeding gums, cavities, and halitosis. Moreover, diabetics are at higher risk of developing periodontal problems, which can eventually lead to tooth loss. The significant increase in the number of diabetes patients will lead to more dental visits, which in turn will propel the growth prospects for the dental crowns and bridges market during the predicted period.
