Abstracts

Dental diagnostic and surgical equipment are used for the diagnosis and treatment of dental problems such as gingivitis, tooth decay, dental caries, periodontitis, injury, and other forms of oral cancers.

According to our (Global Info Research) latest study, the global Dental Diagnostic and Surgical Equipment market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The increased adoption of evidence-based dentistry will lead to the growth of dental diagnostics and surgical equipment market during the forecast period. Recently, it has been observed that many dental associations rely on evidence-based dentistry to set up policies and protocols. The establishment of policies and protocols helps to provide an approach to oral healthcare that follows a defined process of systematically analyzing and collecting scientific evidence to answer a specific clinical question. This evidence will help dentists in their routine clinical practice and will also be helpful in developing a protocol that will make dental treatments more affordable to the oral care population. Another important factor that will drive the prospects for growth in this market is the rising adoption of computer-aided design (CAD)/ computer-aided manufacturing (CAM) technology. Recent advances in CAD/CAM technology have allowed manufacturers to produce dental implants and crowns that are superior to conventional dental crowns and implants. The ability of this technology to shorten the overall treatment time in patients will lead to the augmented adoption of this technology among dental end users. Furthermore, its ability to customize the design of implants and crowns according to the

patient's oral anatomy will also lead to its increased adoption during the next four years.
