Abstracts

The global Dental Gypsum market size is expected to reach \$ 82.64 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

Dental Gypsum is a type of calcium sulfate hemihydrate, commonly used in the field of dentistry for making dental impressions, models, and casts. It is a fine powder that, when mixed with water, forms a moldable paste. This paste hardens into a solid form, allowing dental professionals to create accurate and detailed models of teeth, gums, and other oral structures. The material is known for its smooth texture, high precision, and ability to capture fine details, making it essential in procedures such as crown and bridge work, dentures, and orthodontic appliances.

Dental Gypsum **Market Drivers:**

The growing prevalence of dental diseases, along with the increasing demand for restorative and cosmetic dental procedures, is a key driver for the dental gypsum market. As more people seek dental treatments like crowns, bridges, and dentures, the need for high-quality gypsum materials to create accurate molds and impressions rises. Additionally, innovations in dental technologies, such as the integration of CAD/CAM systems and 3D printing, are further fueling the demand for precision and high-quality dental gypsum. As dental practices become more advanced and the population ages, the dental gypsum market continues to see growth driven by the need for durable and detailed dental models and impressions.

Dental Gypsum Market Challenges:

One of the main challenges faced by the dental gypsum market is the material's

sensitivity to environmental factors, such as humidity and temperature, which can affect its consistency and setting time. Any deviation in these conditions can lead to inaccuracies in dental impressions, compromising the quality of dental prosthetics. Additionally, the increasing shift towards digital dentistry and alternative materials like silicone-based impressions and 3D scanning technologies presents a challenge to the traditional gypsum market. These new technologies offer more efficient and precise solutions, reducing the reliance on traditional dental gypsum products. Furthermore, concerns around the environmental impact of mining and waste disposal of gypsum materials continue to be a challenge for the market.

Europe is the largest consumption place, with a consumption market share nearly 39.13% in 2023. Following Europe, North America is the second largest consumption place with the consumption market share of 32.28%.

Market competition is intense. Mitsui Chemicals, Envista (Kerr Dental), USG, Saint-Gobain Formula, Whip-Mix., etc. are the leaders of the industry, with high-end customers. The top five manufacturers held 47.44% of the market.
