Abstracts

The global Dental Handheld X-rays market size is expected to reach \$ 360.5 million by 2029, rising at a market growth of 4.9% CAGR during the forecast period (2023-2029).

One of the most important benefits of using a handheld X-ray unit is the ability to prioritize your patients' unique needs. There are a number of patients who may have difficulty using a conventional wall-mounted machine, including pediatric and geriatric patients and those with physical disabilities or special needs. Being able to bring the X-ray device to them as they sit or lie in a dental chair can be especially helpful in these situations. Others may be fearful of the larger conventional X-ray units, in which case a handheld device can be less intimidating and put them at ease. Handheld dental X-ray machines can also be positioned more easily at any angle you need, and they offer a space-saving option for smaller practices.

Cost is one of the biggest factors in determining which type of dental X-ray equipment you choose. Yet another advantage of handheld X-ray equipment is that one portable X-ray can be used in multiple dental operatories which is considerably less expensive compared to conventional wall-mounted machines.
