Abstracts

The global Dental Handpiece Air Turbines market size is expected to reach \$ 805 million by 2032, rising at a market growth of 3.1% CAGR during the forecast period (2026-2032).

The dental handpiece is an instrument that uses air or electricity to generate a rotary cutting motion, similar to how a drill operates. Often, handpieces are organized by speed range (high speed or low speed) which determines the applications that are suitable. Typical high speed applications include cutting tooth structure and finishing restorations while low speed handpieces have a range of applications including endodontics, implantology, caries removal and prophylaxis. Air-driven high speed, handpieces typically do not exceed 400,000 rpms, while air-driven low speed handpieces typically operate under 40,000 rpms.

NSK, Danaher, Dentsply Sirona, Morita, A-DEC, W&H. And Bien-Air are the leading manufacturers of dental handpiece air turbines, with the top 3 accounting for about 60%.

Europe is the leading production region with a market share of about 45%, followed by Japan with about 25%.
