Abstracts

According to our (Global Info Research) latest study, the global Dental Implant Abutment Systems market size was valued at USD 3984.5 million in 2023 and is forecast to a readjusted size of USD 4889.4 million by 2030 with a CAGR of 3.0% during review period.

Dental implants are artificial tooth roots made of materials such as titanium or zirconium that could be inserted into the jaw. They not only allow the replacement of the missing tooth for cosmetic and practical reasons, but also preserve the jaw structure by preventing bone restoration or atrophy. Compared to conventional fixed bridges or dentures, they require no grinding down of healthy neighboring teeth, do not cause discomfort when eating or speaking, and are long-lasting with a natural appearance. Another variation is when the crown and abutment are one piece and the lag-screw traverses both to secure the one-piece structure to the internal thread on the implant. Regardless of the type of abutment, after the abutment is attached to the implant, an impression is made and the designed restoration is constructed at the dental laboratory.

A growing prevalence of local manufacturers and an increasingly cost sensitive consumer demographic is contributing to the overall price depreciation and the declining market share of premium implants. Historically, premium dental implant abutment companies have dominated the global competitive landscape but have recently faced rising competition from value and discount brands. The latest and advanced production technologies have also encouraged manufacturers to increase the production of dental implants. Companies have also expanded their dental offerings to meet the demands of cost-conscious patients as well as physicians.
