According to our (Global Info Research) latest study, the global Dental Inlays market size was valued at US\$ 2207 million in 2024 and is forecast to a readjusted size of USD 3379 million by 2031 with a CAGR of 6.2% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Dental inlay is an indirect restoration used to repair moderate to severe caries or structural defects in teeth. It is usually suitable for repairing defects on the occlusal or adjacent surfaces of teeth, especially when traditional filling materials are difficult to restore occlusal strength and precision. Inlays are made by taking molds after tooth preparation and then bonding them to the tooth surface, which can effectively restore the shape, function and occlusal relationship of the teeth. Compared with conventional resin or silver-mercury fillings, dental inlays have higher strength, wear resistance and marginal fit, longer service life, and can better maintain the original structure of the tooth and avoid excessive grinding.

Dental inlay specifications are subdivided into ceramics, composite resins, and alloys. The price range is US\$200/piece---US\$1,500/piece, and the core applications are hospitals and dental clinics. As of May 2025, the main development trend of the industry is driven by digital diagnosis and treatment and aesthetic needs. The global market size in 2024 is US\$2,145.29 million. The CAGR in the past five years is 6.4%. Production companies are mainly distributed in Europe, North America, and Asia. The main consumption areas are North America, Europe, Asia, and other parts of the world. The upstream raw materials of dental inlays are mainly resins, zirconium oxide, and cobalt-

chromium alloys. The main production equipment is 3D printers, sintering furnaces, polishing machines, etc. Judging from the development in the past three years, with the advancement of oral restoration materials, the development has been relatively rapid. The import ratio is about 43%, and there is a great opportunity for domestic substitution.
