## Abstracts

According to our (Global Info Research) latest study, the global Data Historian market size was valued at USD 1326.4 million in 2023 and is forecast to a readjusted size of USD 2062.3 million by 2030 with a CAGR of 6.5% during review period.

A Data Historian (also known as a Process Historian or Operational Historian) is a software program that records and retrieves production and process data by time; it stores the information in a time series database that can efficiently store data with minimal disk space and fast retrieval. Time series information is often displayed in a trend or as tabular data over a time range (ex. the last day, last 8 hours, last year).

A data historian could be applied independently in one or more areas, but it can really show its worth when applied across an entire facility, many facilities in a department, and across departments within an organization. One could discover that a production problem's root cause is insufficient brine supply to the production equipment or one could discover the 2 similar units produce significantly different results over time.

The Global Info Research report includes an overview of the development of the Data Historian industry chain, the market status of Marine (On-Premises, Cloud), Chemicals and Pharmaceuticals (On-Premises, Cloud), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Data Historian.

Regionally, the report analyzes the Data Historian markets in key regions. North America and Europe are experiencing steady growth, driven by government initiatives and increasing consumer awareness.
