Lithium Disilicate ($\text{Li}_2\text{Si}_2\text{O}_5$) is a chemical compound that is a glass ceramic. They are widely used as dental ceramics due to their strength, machinability, and translucency.

Lithium Disilicate has an unusual microstructure that consists of many randomly oriented small and interlocking plate-like needle-like crystals. This structure causes cracks to be deflected, blunted, and/or to branch, which prevents cracks from growing. It has found applications in dentistry as a material for crown, bridge and Veneering.
