Abstracts

Dental Radiography Systems refers to the imaging equipment which use the radiography principle and used in the dental field. Dental Radiographs are commonly called x-rays. Dentists use radiographs for many reasons: to find hidden dental structures, malignant or benign masses, bone loss, and cavities.

A radiographic image is formed by a controlled burst of X-ray radiation which penetrates oral structures at different levels, depending on varying anatomical densities, before striking the film or sensor. Teeth appear lighter because less radiation penetrates them to reach the film. Dental caries, infections and other changes in the bone density, and the periodontal ligament, appear darker because X-rays readily penetrate these less dense structures. Dental restorations (fillings, crowns) may appear lighter or darker, depending on the density of the material.

In this report, Dental Radiography System includes Ordinary Radiography Systems, Panoramic Radiography Systems and Cone-beam computed tomography systems (CBCT).

Scope of the Report:

This report focuses on the Dental Radiography Systems in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Asia-Pacific is poised to grow at the highest CAGR during the forecast period owing to rising awareness about oral health care, increasing disposable income in this region, and rising focus of prominent players on the APAC market increasing product availability.

The product average price declined in the past few years due to the technology

development, the average price will keep this trend in the few future years due to increasing mature manufacturing technology and lowering cost of raw materials. Strong market competition is resulting in annual 0.9-2.5 percent price erosion.

The global intraoral imaging market has seen a dramatic shift from analog film to digital technologies. In the United States, dental practices are rapidly adopting digital sensors. The rapid emergence of digital technology for capturing intraoral X-ray images is a global trend and is driving growth in the overall dental imaging market. This trend is dramatically different across regions, particularly in the United States and Europe. Meanwhile China and other emerging markets is undergoing a rapid adoption of digital technology although the majority of dental practices still use analog film.

The worldwide market for Dental Radiography Systems is expected to grow at a CAGR of roughly 8.6% over the next five years, will reach 980 million US\$ in 2023, from 600 million US\$ in 2017, according to a new GIR (Global Info Research) study.
