Abstracts

Dental Silica is obtained from sodium silicate solution by destabilizing with acid in such a way as to yield very fine particles. The sum of the Assay value and the Sodium Sulfate content is not less than 98.0 percent. Silica is a key component in the paper manufacturing industry. There are different types of silica according to their different manufacturing processes, including fumed silica, silica gel, precipitated silica and colloidal silica. In addition, depending on the performance, silica can be used in different sectors of the paper industry, such as pulp preparation, pulp coating optimization and papermaking defoamers depending on the various performances.
