According to our (Global Info Research) latest study, the global Dental Sterilizers market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Dental sterilizers are imperative to a dental practice. Also referred to as autoclaves, dental sterilizers use steam—at temperatures reaching 270° F—to completely sterilize instruments and equipment. This steam sterilization of various surgical tools and dental instruments is efficient and safe. Designed for safety as well as infection control, sterilizers lock while in use and unlock when instruments are sterile and dry. Depending on what is being sterilized an autoclave cycle can range from 6 to 30 minutes. While steam is a common method for dental instrument sterilization, some dental sterilizers use dry heat and eliminate moisture from the process. Dental autoclaves and sterilizers may be among the most used equipment in a dental practice.
