Abstracts

Dental surgery involves diagnosis, surgical intervention, and adjunctive treatment of oral diseases. This science is applied to restore functional as well as aesthetic aspects of the oral and maxillofacial region, or damage due to any injury or defect involving soft and hard tissues. It can be as simple as a tooth extraction or as complex as a dental implant. Dental surgeons are trained to perform any surgery or cosmetic procedure to correct any kind of problem related to mouth, jaws, facial structures, and neck.

According to our (Global Info Research) latest study, the global Dental Surgical Equipment market size was valued at USD 6050.9 million in 2022 and is forecast to a readjusted size of USD 7840.5 million by 2029 with a CAGR of 3.8% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The increasing demand for cosmetic maxillofacial surgery is one of the key drivers that will stimulate growth in the market during the predicted period. Cosmetic maxillofacial surgery helps to re-establish the normal functioning of defected parts caused from diseases, damage, burn, birth defects, or aging. The surgery enhances individual appearance by correcting the physical deformities. Oral and maxillofacial specialists treat defects and injuries on face, mouth, teeth, and jaws. Maxillofacial surgeons are highly trained to perform surgical procedures to treat any abnormality related to soft tissue (skin and muscle) and hard tissue (bone and cartilage) of the maxillofacial area. The increasing adoption of cosmetic maxillofacial surgery will directly influence the growth of the dental surgical equipment market as patients are encouraged to undergo cosmetic surgeries or procedures because they are minimally invasive.
