## Abstracts

The global Dental Treatment Simulation Software market size is expected to reach \$ 379 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

Dental Treatment Simulation Software is an intelligent auxiliary tool that uses 3D modeling, computer graphics, and virtual reality technology to digitally reconstruct teeth, dentition, jawbone, and oral soft tissues, and simulate various dental treatment processes and outcomes. Its core functions include treatment preview, biomechanical simulation, visual interaction, and teaching and training. The software typically integrates intraoral scan data, CBCT images, and facial scan data, and supports integration with CAD/CAM systems to export treatment guides or prostheses. It is widely used in dental hospitals and clinics for doctor-patient communication, treatment planning, surgical guide design, and teaching and training in dental colleges, aiming to improve the accuracy of treatment plans, reduce surgical risks, and optimize communication efficiency.

In the cost structure of Dental Treatment Simulation Software, R&D and technology costs account for the largest proportion (approximately 50%-60%), including the salaries of engineers involved in 3D graphics engine development, finite element analysis algorithms, AI model development, and multi-source data fusion technology. Data acquisition and clinical validation costs account for approximately 15%-20%, covering data interface licensing from CBCT and intraoral scanning equipment manufacturers, clinical case database collection, and expert verification. Sales and channel costs account for approximately 15%-20%, as customers are primarily dental hospitals, clinics, and dental labs, requiring direct sales teams and promotion through academic conferences. Gross profit margins are high, reaching 70%-80% under the software

subscription model. The market exhibits a mature structure in North America and Europe, with rapid growth in the Asia-Pacific region. North America and Europe are the core global markets with high digital dentistry penetration rates, dominated by companies like 3Shape. The Asia-Pacific region is the fastest-growing area, with strong demand in China, South Korea, and Japan driven by the wave of digital dentistry and increasing implant penetration.

The upstream of the industry chain consists of 3D engine and algorithm licensors and data interface and hardware manufacturers. Downstream customers cover dental hospitals, chain clinics, and dental labs, with typical clients including Tongce Medical and Ruier Dental. Profits are concentrated in the hands of leading software vendors who control core algorithms and clinical data barriers.
