According to our (Global Info Research) latest study, the global Dental Wet Machining Milling Machines market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Dental wet processing milling machine is a kind of equipment used to produce dental restorations. The digitalized dental restoration design data is transferred to the processing milling machine through CAD/CAM technology, and then the ceramic block material is milled to make dental restorations. Compared with traditional hand-made methods, dental wet-processing milling machines can achieve high-precision, high-efficiency, and high-repeatability manufacturing processes, which greatly improve the quality and precision of dental restorations. The dental wet processing milling machine uses wet processing technology, that is, it needs to spray water continuously to cool down during the processing, and take away the generated heat and chips to ensure that the porcelain block will not overheat, burn or break. Therefore, using a dental wet milling machine requires a water source and drainage system. In addition, the processing milling machine also needs to be equipped with suitable milling tools and ceramic block materials. Dental wet machining milling machine can make a variety of dental restorations, including full crowns, partial crowns, veneers, bridges, implant abutments, orthodontic appliances, etc., suitable for various porcelain materials, such as zirconia, cobalt chromium alloy, Porcelain etc. Dental wet machining milling machine has become one of the main tools in the manufacture of modern dental restorations and is widely used in the field of oral restoration.
