Abstracts

According to our (Global Info Research) latest study, the global Dental Amalgam Separator market size was valued at US\$ 50.94 million in 2025 and is forecast to a readjusted size of US\$ 35.52 million by 2032 with a CAGR of -5.1% during review period.

Amalgam separators remove amalgam particles from the wastewater to reduce the amount of amalgam entering the sewage system. Amalgam separators are devices designed to capture amalgam particles from dental office wastewater through sedimentation, Centrifugal, centrifugation, or a combination of these mechanisms. Some separators may also use ion exchange technology to remove mercury from wastewater.

The European Union (EU) has provisionally agreed that dental amalgam fillings are to be banned for children under the age of 15 and for pregnant and breastfeeding women as of 1 July 2018. However, a general phasing out of dental fillings containing mercury is off the agenda for the time being. Instead, it is to be decided by 2020 whether the use of the material be stopped entirely by 2030. Due to the dental amalgam fillings are to be banned in each countries, the dental Amalgam Separators will also quit the market.

Dental amalgam is a tooth filling material that is approximately 50% mercury, a neurotoxin that is recognized as a serious global contaminant. In addition, dental amalgam is regarded as an outdated material that is inconsistent with the tenets of modern dentistry (such as the principle of minimally invasive dentistry) and unnecessarily exposing patients and clinicians to environmental toxins. Along with governments in other parts of the world, many countries are already working to phase

down.

The global main manufacturers of Dental Amalgam Separators include Solmetex, MedenteX, METASYS, D?rr Dental, Rebec Environmental, Dental Recycling North America, Air Techniques, M.A.R.S.
