According to our (Global Info Research) latest study, the global Denture Reline Materials market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

Denture relining materials are used in dentistry to adjust the fit of a denture by reshaping its underside to better conform to the patient's gums. Over time, gums and bone tissue can change due to natural resorption or shrinkage, causing dentures to become loose and uncomfortable. Relining helps improve the fit and stability of the denture without needing to create an entirely new one.
