The deodorizing and disinfecting spray system is an environmental purification device that integrates spraying technology with the principles of disinfection and deodorization. The system uses high-pressure spraying or ultrasonic atomization technology to evenly spray deodorants and disinfectants into the air in the form of tiny droplets. These droplets can quickly spread and cover the entire space, effectively neutralizing or adsorbing odor molecules in the air, while killing or inhibiting harmful microorganisms in the air, thereby achieving the dual effects of deodorization and disinfection. The system is widely used in various places where air quality and sanitary conditions need to be improved.
