Deoxycholic acid is a bile acid, which is essentially a substance produced by the human body. Its main function is to help digest fat. Deoxycholic acid injection is a medical beauty and therapeutic drug that dissolves local fat through subcutaneous injection. Its mechanism of action is to destroy the fat cell membrane, causing fat cell apoptosis and release fatty acids, and finally clear the metabolites through macrophages to achieve a local lipolysis effect. As a core product of non-surgical lipolysis, deoxycholic acid injection is the future development direction of its technological iteration and multi-site application. Allergan dominates the international market, and domestic companies such as Minovi are accelerating to catch up.
