Abstracts

DNA purification is the process of isolation of DNA from sample by using both chemical and physical methods to obtain DNA in a relatively purified form. This purified DNA is further used for biological investigations, such as gene sequencing. DNA purification is an important segment of the genomic material isolation and purification market. It impacts application areas that range from fundamental research to routine diagnostics and therapeutic decision making. DNA purification is important for determining the unique characteristics of a DNA molecule, such as its size, shape, and function.

Scope of the Report:

This report studies the Deoxyribonucleic Acid (DNA) Purification market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Deoxyribonucleic Acid (DNA) Purification market by product type and applications/end industries.

Owing to the increased investments in R&D by the government and private sectors, the developing countries are witnessing an increase in the number of research laboratories. Additionally, investments in research and the awareness of the value of diagnostics in healthcare will also drive the demand for research laboratories. According to this market research and analysis, this rise in number of research laboratories will be one of the primary growth factors for the DNA purification market.

Developing countries in regions such as APAC are the emerging markets for these products as the region is witnessing an increase in the number of research and clinical testing laboratories. This is mainly due to the focus of the governments in this region

towards organizing capital spending programs for research laboratories and academic institutions to ensure more development in the dna purification methods. This will lead to the rise in the demand for DNA purification kits from the emerging markets, which will subsequently drive market growth.

The DNA purification market appears to be highly fragmented due to the presence of various regional and international vendors. The competition in this market will intensify further with an increase in product and service extensions, product innovations, and M&A. With the strong presence of the international players, the regional vendors are finding it difficult to compete in the DNA extraction market especially in terms of factors such as quality, market reach, and financial resources.

The global Deoxyribonucleic Acid (DNA) Purification market is valued at xx million USD in 2017 and is expected to reach xx million USD by the end of 2023, growing at a CAGR of xx% between 2017 and 2023.

The Asia-Pacific will occupy for more market share in following years, especially in China, also fast growing India and Southeast Asia regions.

North America, especially The United States, will still play an important role which cannot be ignored. Any changes from United States might affect the development trend of Deoxyribonucleic Acid (DNA) Purification.
