According to our (Global Info Research) latest study, the global Depolarization Splitting Cube market size was valued at US\$ 847 million in 2024 and is forecast to a readjusted size of USD 1216 million by 2031 with a CAGR of 5.4% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The depolarization splitting cube is made of two right angle prisms of the same size glued together. One of the right angle prisms is coated with depolarization splitting film. The splitting film can be metal or all dielectric. The components of p-light and s-light in the reflected or transmitted light obtained by depolarization splitting cube are nearly the same, which is especially suitable for polarization sensitive receivers in some applications.
