According to our (Global Info Research) latest study, the global Depolymerization Catalysts market size was valued at US\$ 1532 million in 2025 and is forecast to a readjusted size of US\$ 2407 million by 2032 with a CAGR of 6.4% during review period.

In 2024, global depolymerization catalysts production reached approximately 156,770 ton, with an average global market price of around USD 9,500 per ton. A factory gross profit of USD 2,660 per ton with 28% gross margin. A single line full machine capacity production is around 1,200 ton per line per year. downstream demand is concentrated in plastic chemical recycling operators, petrochemical refinery, biomass processors and specialty material recovery. A zeolite supported metal oxide depolymerization catalyst is use to convert post-consumer PET bottles into purified terephthalic acid and ethylene glycol, resulting in a recycled monomers used for a PET resin. Depolymerization catalysts are substances (chemical or biological) that speed up the breakdown of large polymer chains into their smaller building blocks (monomers or oligomers) for chemical recycling, creating valuable feedstocks or fuels, differing from thermal methods by offering higher selectivity and purity for circular economy goals.
