The deposition chamber liner refers to the protective pad used for the internal surface of the deposition chamber in semiconductor manufacturing equipment. Deposition chamber liners are usually made of high-purity materials to protect the interior surface from the corrosive gases used during the manufacturing process. They are key components in the semiconductor manufacturing process, which can improve the service life and production efficiency of equipment. Commonly used deposition chamber lining materials include quartz, ceramics, and metals. The type of deposition chamber liner chosen depends on the specific requirements of the semiconductor manufacturing process, including the type of gas used, temperature, and pressure conditions.
