A depressed center grinding wheel, also known as a type 27 grinding wheel, is a specific type of abrasive wheel that features a recess or depression in the center of the wheel. This design allows the wheel to be used at various angles without the risk of the grinder's body hitting the work surface. Depressed center grinding wheels are typically used with angle grinders and are ideal for applications where the operator needs to work at an angle, such as grinding edges, corners, and flat surfaces. They are widely used in industries such as construction, metal fabrication, and automotive repair.
