The global Depth Filtration in Life Sciences (Biologics Manufacturing) market size is expected to reach \$ 944.2 million by 2029, rising at a market growth of 4.4% CAGR during the forecast period (2023-2029).

Global 5 largest manufacturers of Depth Filtration in Life Sciences (Biologics Manufacturing) are Merck Millipore, Cytiva, Sartorius, 3M and Cobetter, which make up over 93%. Among them, Merck Millipore is the leader with about 31% market share.

North America is the largest market, with a share about 37%, followed by Europe and Asia Pacific, with the share about 31% and 26%. In terms of product type, Depth Filter Cartridges occupies the largest share of the total market, about 35%. And in terms of product Application, the largest application is Biologics Full-scale Production, followed by Biologics Pilot-scale Manufacturing.

Depth filtration is an important process in biologics manufacturing, particularly for the purification and clarification of biopharmaceutical products. Biologics are large and complex molecules derived from living organisms, such as proteins, antibodies, vaccines, and gene therapies. The depth filtration technique helps remove impurities and particles from the biologics solution, ensuring its quality and safety.

Depth filtration relies on a porous filter media in removing impurities and contaminants from liquids. It is designed to capture particles of varying sizes based on the specific filtration process requirements.

Depth filtration is widely used for the clarification of cell culture clarification. The cell

culture systems can contain yeast, bacterial and other contaminant cells and hence, an efficient clarification stage is vital to separate the cells and other colloidal matter to produce a particle free cell system. Depth filtration is also employed as a polishing step during the final purification of biologics. After other purification techniques like chromatography, there may still be residual impurities present in the biologics solution. Depth filters with finer porosity can be used to further remove these impurities and achieve the desired purity level.
