Dermal fillers help to diminish facial lines and restore volume and fullness in the face. Dermal fillers can be used to: plump thin lips, enhance shallow contours, soften facial creases and wrinkles and improve the appearance of recessed scars. Dermal fillers can be very helpful in those with early signs of aging, or as a value-added part of facial rejuvenation surgery. Botulinum toxin (BTX) is a neurotoxic protein produced by the bacterium *Clostridium botulinum* and related species. It prevents the release of the neurotransmitter acetylcholine from axon endings at the neuromuscular junction and thus causes flaccid paralysis. Infection with the bacterium causes the disease botulism. The toxin is also used commercially in medicine, cosmetics and research.
