Acute cutaneous necrosis can be defined as a skin disease with sudden onset of tissue death that results in significant morbidity and is usually, but not always, excruciatingly painful. Early diagnosis can allow for early therapy and can decrease the chances of morbidity and loss of life. A thorough history is mandatory including recent reavel, drugs, underlying illnesses and recent surgical procedures. Blood tests that are often helpful are creatinine phosphokinase, blood cultures, antinuclear antibodies, rheumatoid factor, antinuclear cytoplasmic antibodies, hypercoagulability screen, creatinine, complete blood count and human immunodeficiency virus test. Other procedures such as computerized axial tomography and magnetic resonance imaging also helps to determine the extent of disease.

The global pharmaceutical market is 1475 billion USD in 2022, growing at a CAGR of 5% during the next six years. The pharmaceutical market includes chemical drugs and biological drugs. For biologics is expected to 381 billion USD in 2022. In comparison, the chemical drug market is estimated to increase from 1005 billion in 2018 to 1094 billion U.S. dollars in 2022. The pharmaceutical market factors such as increasing demand for healthcare, technological advancements, and the rising prevalence of chronic diseases, increase in funding from private & government organizations for development of pharmaceutical manufacturing segments and rise in R&D activities for drugs.
