According to our (Global Info Research) latest study, the global Dermal Regeneration Matrix Device market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Skin is the largest organ of the human body. It is composed of three layers: epidermis-the outermost layer; dermis-contains sweat glands, hair follicles and connective tissue and hypodermis-made up of fat and connective tissue. The main functions of the skin includes protection, sensation and regulation. The skin acts as a barrier and provides protection against harmful chemicals, radiation, microorganism and changing environmental conditions. It also helps regulate body temperature and maintain fluid balance. Skin is an extensive network of nerve cells and contains various receptors to detect changes in the environment such as touch, pain, heat and cold. Damage to skin due to burn or trauma can disrupt all the vital functions performed by the skin.

Technological advancement and continued research in the development of artificial skin promises to bring more products to the marketplace. Increasing adoption of the device and long-term benefits associated with its application are some of the factors expected to fuel growth of the global dermal regeneration matrix device market over the forecast period. However, less awareness among the consumers and high cost of device are some of the key factors that could hamper growth of the market.
