Abstracts

Dermatophytic onychomycosis is a fungal infection of the nail plate, nail bed, and, in some cases, the skin surrounding the nail plate. It is caused by yeast, dermatophytes, and molds; dermatophytes account for 90% of all cases. The fungus, especially *Trichophyton rubrum*, *Trichophyton mentagrophytes*, and *Epidermophyton floccosum*, infects the skin, hair, or nails. It is often perceived by people to be an active and contagious infection. Onychomycosis may persist or worsen if not treated. The fungi that cause onychomycosis exist in common sites such as floors, soil, socks, and shoes. Therapies for onychomycosis include debridement and drugs. Debridement is time consuming and minimally effective in eradicating the fungal infection. Systemic drug treatment is most effective in treating onychomycosis.

Scope of the Report:

This report focuses on the Dermatophytic Onychomycosis in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Factors such as the rising prevalence of dermatophytic onychomycosis, heavy investments to develop therapies, and frequent product innovations will aid in the steady growth of this market during the forecast period. An important factor that will impel the prospects for growth in this market is the augmented focus on combination therapies. Recently, it has been observed that a combination of topical and systemic treatment increases the cure rate when compared to individual therapies. Since combination therapies have improved clinical efficiency and are more cost-effective than terbinafine, they are increasingly being preferred over individual terbinafine-based therapies as they have a higher cure rate.

The global dermatophytic onychomycosis market is intensely competitive owing to the presence of numerous small and large vendors that operate at a local or global scale. To survive and succeed in this market, the vendors enter into strategic alliances with smaller players to manufacture and market new drugs.

The Americas dominated this market and is envisaged to retain its dominating market position by the end of 2020 owing to the presence of a well-developed healthcare system

The worldwide market for Dermatophytic Onychomycosis is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
